Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

```
No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ; Search time 8.55049 Seconds (without alignments) 357.079 Million cell updates/sec

Patent No. 6320022

GENERAL INPORMATION:

APPLICANT: Cuttitta, Frank; Martinez,

APPLICANT: Alfredo; Miller, Mae Jean; Unsworth, Edward

APPLICANT: Alfredo; Miller, Mae Jean; Unsworth, Edward

APPLICANT: As and Ascii, Charles

TITLE OF INVENTION: Adrenomedullin (AM) and the Gene-Related

TITLE OF INVENTION: Product (PAMP) in Human Pathology and

TITLE OF INVENTION: Physiology

NUMBER OF SEQUENCES: INVENTION: Physiology

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 31;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Indels

                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidy) and malenimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptides stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various discorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.
                                  adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to antagonists of the vasoactive peptide calcitonin gene related peptide (CGRP) and other members of the CGRP superfamily. The invention also relates to amino the terminal modifications of peptides to improve their ability to bind to a member of the CGRP-receptor super-family. CGRP antagonists are used for inhibiting CGRP activity which can be used in vitro e.g. in assays to identify and/or isolate CGRP receptors or with intact cells either in vitro or in vivo to inhibit the effect of CGRP binding to its receptor. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vasoactive peptides useful for inhibiting calcitonin gene related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       peptide; calcitonin gene related peptide; CGRP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                        adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                 Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host \dot{\cdot}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Adrenomedullin; glycine extended adrenomedullin; AM; AM-gly; adrenomedullin precursor; fusion protein; pharmaceutical; diagnostic.

adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (M1) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host -

The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AMH19806 to AMH19806 and AAB7510 to AAB75124 repersent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                          rrouwing agrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for promoting passive elongation of vesicle smooth muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Passive elongation; vesicle smooth muscle; uropathic activity; adrenomedulin; urinary disorder; incontinence; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a method (M1) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications, AAH19806 to AAH19866 and AAB75110 to AAB75124 repersent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ಥ

uropathic activity;

```
This invention relates to a composition for promoting passive elongation of vesicle smooth muscle. The composition contains adrenomedulin, and has uropathic activity. The composition can be used for promoting passive elongation of vesicle smooth muscles, this is useful for releving uninary disorders such as impending urinary incontinence, reflex urinary incontinence and urinary incontinence with overflow. The present sequence composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Composition for promoting passive elongation of vesicle smooth muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Porcine; pig; adrenomedullin; precursor; bradykinin antagonist;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 YRQSMNNFQGLRSFGCRFGTCTVQKLAHQIYQFTDKDKDNVAPRSKISPQGY

                                          This invention relates to a composition for promoting passive elongation of vesticle smooth muscle. The composition contains adrenomedulin, and has uropathic activity. The composition can be used for promoting passive elongation of vesticle smooth muscles, this is useful for relieving unitary disorders such as impending urinary incontinence, reflex urinary incontinence and urinary incontinence with overflow. The present sequence composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a composition containing adrenomedullin for inhibiting automatic uterine contraction or contraction caused by bradykinin. The invention also relates to the use of adrenomedullin in the preparation of a drug for preventing premature birth or miscarriage. The composition of the invention can be used for preventing premature birth, preventing miscarriage, stopping delivery before caesarean section or for treating dysmenorrhoea. The present sequence represents human adrenomedullin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Composition for inhibiting automatic uterine contraction or contraction caused by bradykinin comprises adrenomedullin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; adrenomedullin; precursor; bradykinin antagonist;

calcitonin gene related peptide (CGRP) and other members of the CGRP superfamily. The invention also relates to amino the terminal modifications of peptides to improve their ability to bind to a member of the CGRP-receptor super-family. CGRP antagonists are used for inhibiting CGRP activity which can be used in vitro e.g. in assays to identify and/or isolate CGRP receptors or with intact cells either in vitro or in vivo to inhibit the effect of CGRP binding to its receptor. The present sequence is rat adrenomedullin peptide.
                  Vascactive peptides useful for inhibiting calcitonin gene related peptide receptor activity \boldsymbol{\cdot}

                                                                                                                                                                                                                                                                                                                                              The invention relates to a composition containing adrenomedullin for inhibiting automatic uterine contraction or contraction caused by bradykinin. The invention also relates to the use of adrenomedullin in the preparation of a drug for preventing premature birth or miscarriage. The composition of the invention can be used for preventing premature birth, preventing miscarriage, stopping delivery before caesarean section or for treating dysmenorrhoea. The present sequence represents porcine adrenomedullin precursor.
                                                                                                                                                                                                                                                                                  Composition for inhibiting automatic uterine contraction or contraction

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A. Accession: PN0610
A. Molecule type: protein
A. Molecule type: prodresor contains a unique 20-amino acid sequence designated proadrenome
C. Comment: This precursor contains a predicted <SIG>
C. Reyworks: amidated carboxyl end
F. 1-2.1/Domain: signal sequence #status predicted <PEU>
F. 22-118/Product: proadrenomedullin #status predicted <PEU>
F. 24.1/Product: proadrenomedullin #status predicted <MAT>
F. 34.1/Modified site: amidated carboxyl end (Arg) (amide in mature form from following gly F: 143/Modified site: amidated carboxyl end (Tyr) (amide in mature form from following gly

Myltcrnate names: tyrosinase (EC.114.10.1) Cintered (Species: Gallus gallus (chicken)
C; Species: Car. Kidson, S.H.
Gene 169, 191-195, 1996
A; Title: Characteristic sequences in the promoter region of the chicken tyrosinase-en A; Reference number: PC4153; MUID:96194800
A; Reference number: PC4153; MUID:96194800
A; Residues: 1-273 <FER>
A; Residues: 1-273 <FER>
A; Residues: 1-273 <FER>
A; Residues: 1-273 <FER>
A; Rocross-references: GB:L46805; NID:g1146320; PIDN:AAB08441.1; PID:g1146321
A; Note: The DNA sequence includes the first exon and a part of the first intron C; Comment: This enzyme is the rate-limiting enzyme in pigment blosynthesis.
C; Genetics:
A; Genetics:
A; Genetics:
C; Superfamily: monophenol monooxygenase
C; Keywords: oxidoreductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
